

SAUNA PROFILE - TECHNICAL INFORMATION

Spruce

The wood of the spruce is almost white with a light yellowish undertone. It is one of the lightest coniferous woods. Spruce is often used for saunas, especially lining the outer walls. We offer a Softline siding profile with an extended tongue and groove, which visually eliminates the natural shape changes in the wood due to changes in humidity.

Technical information:

Coniferous, light and soft wood, whitish to yellowish in colour with resinous channels

Grade A

Average density	0,450 g.cm ⁻³
Longitudinal drying out	0,3 %
Radial drying out	3,6 %
Drying out in tangential direction	7,8 %
