

RHOMBUS THERMOWOOD PINE 20x92 MM WITH INVISIBLE CONNECTION USING *H-CLIP*

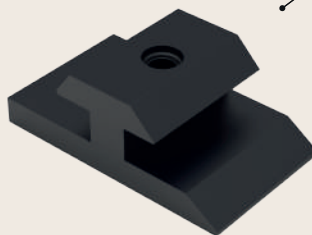

Specially designed H-clips allow faster, easier and more economic installation of wooden facades, allowing air circulation through uniform 5 mm gaps and also thanks to the gap created between the façade profiles and the underlying structure.

They allow independent assembly of the wooden profiles and in case of any problem that may occur in the wood, the damaged part can be easily replaced with a new one.

H-CLIP

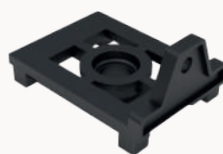

Underconstruction

Facade profile

ADDITIONAL PRODUCTS:

• L-Clip for underconstruction

• Screws

When installing the cladding, the H-clips automatically create uniform gaps between the panels. The clip system allows invisible connection and at the same time excellent structural protection of the wood.
